## A NEED FOR PRECISION

BERGEON SA 4.U / E31

With over 200 years of experience, Bergeon has become a partner to the watchmaking industry with its high-precision tools and equipment. The company offers a wide range of products and is divided into four sectors:

**Bergeon Essential:** over 10,000 tools and materials for the watchmaking industry.

**Bergeon Technologies:** a technical office which works with clients to offer the optimal solutions for their specific requirements by developing various tools and items of equipment.

**Bergeon Integrator:** a solution for optimising work space through comprehensive integration of the various constraints (technical, HR and energy-related).

**Bergeon Marketing:** responds to the need for a visual identity and personalisation of all the products, especially in the Essential range.

The Bergeon Technologies platform is playing an ever more significant role in developing the Essential range. This responds to the very high customer demand for ever more technical products with a high level of added value. These products are designed at

the R&D unit by six people along with the CNC prototyping workshop. This year, Bergeon is highlighting two new products at Baselworld, including the 7965 Tork Speed dynamometric cartridge with torque speed adapted so it can be mounted on a screwdriver with special knurled profile. This enables a high level of precision to be achieved with extreme cuts. The screwdriver also takes a

second cartridge which facilitates screwing and unscrewing as required. The 7047 PR01-TP, Time Runner, is a new device for winding watches from the crown. It ensures ultra-precise electronic adjustments to be made in terms of the number of winding turns, the winding torque and the winding speed.

Thanks to its unrivalled expertise, Bergeon is the global leader in after-sales service for boutiques and watchmaking workshops with 40 per cent of its customers based in Switzerland and 60 per cent being export customers (of which 50 per cent in Europe, 25 per cent in Asia, 15 per cent in the USA and 10 per cent on other continents).
